Read all of this leaflet carefully before you start taking this medicine because it contains important information for you. Keep this leaflet. You may need to read it again. If you have any further questions, ask your doctor, pharmacist or nurse. This medicine has been prescribed for you only. You should not give it to others. It may harm them, even if they have the same signs of illness. If you get any side effects, talk to your doctor, pharmacist or nurse. See section 4.

1. WHAT SEAGRA ORAL JELLY IS AND WHAT IT IS USED FOR
SEAGRA ORAL JELLY contains the active substance sildenafil citrate, which belongs to a group of medicines called phosphodiesterase type 5 (PDE5) inhibitors. This medicine works by relaxing the blood vessels of the penis, allowing the influx of blood to the penis when sexually stimulated. This medicine will only help you get an erection if you are sexually stimulated. This medicine is a treatment for adult men with erectile dysfunction, more commonly known as impotence. That is, when a man can not obtain, or maintain, a penile rigidity in erection, suitable for sexual activity.

2. WHAT YOU NEED TO KNOW BEFORE YOU TAKE SEAGRA ORAL JELLY
Do not take SEAGRA ORAL JELLY
- If you are allergictosildenafil or anyofthe other ingredients of this medicine.
- If you are taking medicines called nitrates, as the combination may cause a dangerous drop in your blood pressure. Tell your doctor if you are taking any of these medicines, which are usually used for relief of angina pectoris (or "chest pain"). If you have any further questions, ask your doctor or pharmacist.
- If you are using any of the medicines known as nitric oxide donors, such as amyl nitrite (poppers), as the combination may lead to a potentially dangerous decrease in your blood pressure.
- If you are taking riociguat. This drug is used to treat pulmonary arterial hypertension (ie, high blood pressure in the lungs) and chronic thromboembolic pulmonary hypertension (ie, high blood pressure in the lungs due to the presence of clots). PDE5 inhibitors, such as SEAGRA ORAL JELLY, have been shown to increase the hypotensive effects ofthis drug. If you are taking riociguat or if you have further questions, ask your doctor. If you have severe heart or liver problems.
- Ifyou have recently had a stroke or a myocardial infarction, or if you have low blood pressure.
- If you have certain rare hereditary eye diseases (such as retinitis pigmentosa).
- If you have ever had vision loss due to non-arteritic anterior ischemic optic neuropathy (NAI ON).

Warnings and Precautions
Talk to your doctor, pharmacist or nurse before taking SEAGRA ORAL JELLY
- If you have sickle cell anemia (a red blood cell anomaly), leukemia (blood cell cancer), multiple myeloma (bone marrow cancer).

If you have penile deformation or Peyronie's disease.
- If you have heart problems. In this case, your doctor should carefully evaluate whether your heart supports the extra effort associated with a sexual relationship.
- If you currently have a stomach ulcer ora bleeding problem (such as hemophilia).
- If you have sudden or sudden loss of vision, stop taking this medicine and contact your doctor immediately

You should not take this medicine together with any other oral or local treatments for erectile dysfunction.
You should not take SEAGRA ORAL JELLY if you do not have erectile dysfunction.
You should not take SEAGRA ORAL JELLY if you are a woman. You should not use this medicine concurrently with pulmonary arterial hypertension (PAH) containing sildenafil or any other PDE5 inhibitors.
Special care to be taken in patients with kidney or liver problems
You should tell your doctor if you have kidney or liver problems. Your doctor may prescribe a lower dose.
Children and adolescents
This medicinal product must not be administered to individuals under the age of 1 8 years.
Other medicines and SEAGRA ORAL JELLY
Tell your doctor or pharmacist if you are taking or have recently taken any other medicines.
SEAGRA ORAL JELLY oral jelly may interfere with some medications, especially those used to treat "chest pain." In case of medical emergency, you should inform your doctor, pharmacist or nurse who is taking this medicine and when you did. Do not take this medicine with other medicines unless your doctor tells you to.
You should not take this medicine if you are taking nitrates because the combination of these medicines can cause a dangerous drop in your blood pressure. Always tell your doctor, pharmacist or nurse if you are taking any of these medicines, which are commonly used to relieve angina pectoris (or "chest pain").
You should not take this medicine if you are using any of the medicines known as nitric oxide donors, such as amyl nitrite (poppers), as the combination may also lead to a dangerous drop in your blood pressure.
If you are already taking riociguat, tell your doctor or pharmacist.
If you are taking medicines known as protease inhibitors, such as for HIV treatment, your doctor may recommend that you start treatment with the lowest dose (25 mg) of this medicine.
Some patients taking alpha blockers for treatment of high blood pressure or enlarged prostate may experience dizziness or a feeling of faintness that may be caused by low blood pressure when the subject sits or stands up quickly. Some patients had these symptoms when they took SEAGRA ORAL JELLY with alpha blockers. These conditions are most likely to occur within 4 hours after taking this medicine. To reduce the likelihood of these symptoms occurring, you should be taking a regular daily dose of your alpha blocker before starting treatment with this drug. Your doctor may recommend that you start treatment with the lowest dose (25 mg) of this medicine.
SEAGRA ORAL JELLY with food, drinks and alcohol.
This medicine may be taken with or without food. However, you may find that this medication may take longer to work if you take it with a heavier meal.
Drinking alcohol can temporarily prevent the ability to get an erection. To get the maximum benefit from themedicine, it is advised not to drink large quantities of alcoholic beverages before taking this medicine.
Pregnancy, breastfeeding and fertility
This medicine is not intended for use by women.
Driving and using machines
This medicine may cause dizziness and may affect your vision. You should be aware of how you respond to this medicine before driving or using machines.

3. HOW TO TAKE SEAGRA ORAL JELLY
Take this medicine exactly as your doctor or pharmacist has told you. Talk to your doctor or pharmacist if you are not sure. The recommended starting dose is 50 mg.
You should not use SEAGRA ORAL JELLY more than once a day.
You should take this medicine about one hour before the scheduled time for sexual activity. Take the entire package with a glass of water.
You should check with your doctor or pharmacist if you feel that the effect of this medicine is too strong or too weak.
This medicine will only help you get an erection if you are sexually stimulated. The length of time this drug takes to work varies from person to person, but usually it varies from half an hour to an hour. You may find that this medication takes longer to work if you take it with a heavier meal.
If this medicine does not help you get an erection or if your erection does not last long enough to complete the intercourse, you should tell your doctor.
If you take more SEAGRA ORAL JELLY than you should
You may experience an increase in side effects and their severity. Doses greater than 100 mg do not increase efficacy.
You should not take more SEAGRA ORAL JELLY than your doctor has told you. If you take more tablets than you should, contact your doctor.
If you have any further questions on the use of this product, ask your doctor, pharmacist or nurse.

4. POSSIBLE SIDE EFFECTS
Like all medicines, this medicine can cause side effects, although not everybody gets them. The reported side effects associated with the use of this medication are usually mild to moderate and of short duration. If you experience any of the following serious side effects, stop taking SEAGRA ORAL JELLY and get medical help right away: Allergic reaction - occurs infrequently (can affect up to 1 in 100 people)Symptoms include sudden wheezing, difficulty breathing or dizziness, swelling of the eyelids, face, lips, or throat.
