

SPECIFICATION - DENK PHARMA

product: Carvedi-Denk 6-25

artwork: leaflet

language(s): EN, FR, PT

material number: 6300/002

dimension: 733 x 148 mm

prefold: 2 x pre-folded

pharma code: -

printing colours: ♦ PANTONE YELLOW C

♦ Prozess BLACK

revision/date: 1 / 04.09.2020, BBUL

2 / 14.09.2020, MKE

**Carvedi-Denk 6.25**

Tablet - oral use

Beta-blocker

Active substance: carvedilol

Package leaflet: Information for the patient

Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.

2. What you need to know before you take Carvedi-Denk 6.25

Do not take Carvedi-Denk, if you

- are allergic to carvedilol or any of the other ingredients of this medicine;
- have severely impaired cardiac function (cardiogenic shock)
- have progressively worsening heart failure (instable/decompensated cardiogenic heart failure)
- have an acute pulmonary embolism
- have an unusual form of tightness of the chest, known as Raynaud's syndrome (painful fingers or toes, which initially turn bluish, then whitish and finally reddish in colour)
- have an overactive thyroid (hyperthyroidism or thyrotoxicosis)
- have had a recent heart or lung transplant surgery
- have mild heart block (1st degree)
- have a history of severe hypersensitivity reactions (allergies) or if you have had a severe reaction to carvedilol
- have untreated heart failure or certain types of heart conduction disorders (e.g. 2nd or 3rd degree AV block [unless you are being treated with a pacemaker])
- if you are using digoxin, verapamil or other medicines to control your heart failure following a respiratory disease (or pulmonary oedema)
- if you have sick sinus syndrome, atrio-atrial block
- if you have heart failure, following a respiratory disease (or pulmonary oedema)
- if you have chronic bronchitis or another respiratory tract disease with a tendency to cramp-like constriction of the respiratory passages (e.g. chronic obstructive pulmonary disease)
- if you wear contact lenses - carvedilol can reduce tear flow and breathing problems, lung oedema (fluid on the lungs), asthma and breathing difficulties during treatment;
- if you have Raynaud's disease, which is not being treated with medicines (e.g. alpha-blockers);
- have severe liver disease
- have hyperactivity of the blood (metabolic acidosis)
- are taking certain antidepressants (e.g. MAO inhibitors, apart from MAO inhibitors)
- are present receiving infusions containing verapamil, diltiazem or other antiarrhythmic drugs
- are under 18 years old

Warnings and precautions

Tell your doctor or pharmacist if you are taking, have recently taken or might take any other medicines.

Other medicines and Carvedi-Denk

Tell your doctor or pharmacist if you are taking, have recently taken or might take any other medicines.

What Carvedi-Denk 6.25 is and what it is used for

Carvedi-Denk 6.25 belongs to the beta blocker group of medicinal products (medicines for treating high blood pressure or increased heart rate).

Carvedi-Denk 6.25 is used for heart/circulatory diseases.

It is used for heart failure (cardiac insufficiency).

It is used for hypertension (high blood pressure).

Mode d'administration
Artefacto é comprimido que se coquear com uma quantidade de bolo, o suficiente. É então recomendado de tomar Carvedi-Denk 6.25, durante Carvedi-Denk 6.25 é estabelecida quando que sól indicação. Os efeitos fazendo exceção são descritas na "Descrição dos efeitos indesejáveis particulares <cl>desse.

Sauf prescription différente de votre médecin, la dose habituelle est la suivante:
Insuffisance cardiaque chronique et stable
Dose quotidienne de carvediol
Dose initiale : Les 14 premiers jours : + 3125 mg le matin et 3125 mg le soir.
Dose normale : Si le dosage initial est bien tolérée, il devra être augmentée selon les palpes ouverts, de 25 mg à 25 mg toutes les deux semaines : + 25 mg le matin et 25 mg le soir, puis + 25 mg le matin et 25 mg le soir.
La dose finale devra être maximale tolérée : + 25 mg le matin et 25 mg le soir.

Dose maximale :

+ 25 mg le matin et 25 mg le soir.

Si le dosage final égale ou dépasse la dose maximale tolérée, il devra être arrêté brusquement. Il doit être arrêté progressivement.

Pour éviter une aggravation de l'angoie, un autre traitement anti-angineux peut être instauré parallèlement à l'arrêt progressif.

Déclaration des effets secondaires

Un surdosage peut entraîner une crise d'insuffisance cardiaque, un choc cardiaque et un arrêt cardiaque. Des difficultés respiratoires, des spasmes bronchiques, des vomissements, des céphalées et des convulsions peuvent également survenir.

Si vous avez pris plus de Carvedi-Denk 6.25 que vous n'en aviez prévu, il faut immédiatement consulter votre pharmacien.

Si vous oubliez de prendre Carvedi-Denk 6.25

La posologie de Carvedi-Denk 6.25 ne doit pas être modifiée sans l'accord de votre médecin. De même, le traitement ne doit pas être arrêté brusquement. Il doit être arrêté progressivement.

Carvedi-Denk 6.25 doit être arrêté lentement.

Avant chaque augmentation de dose, votre médecin vous examinera (fonction rénale, poids, tension, fréquence et rythme cardiaque, état de conscience, etc.).

L'aggravation de l'insuffisance cardiaque ou les effets indésirables liés à Carvedi-Denk 6.25 doivent être signalés.

Si nécessaire, il faut de Carvedi-Denk 6.25.

La dose d'entretien doit être déterminée pour chaque patient individualisé sous surveillance médicale étroite. Le dosage de l'entretien de la vertige cardiaque (bradycardie), la fréquence des effets indésirables ne dépend pas de la dose.

Le risque de survenue de la plupart des effets indésirables associés au carvediol est similaire quelle que soit l'indication. Les effets faisant exception sont décrits sous « Description des effets indésirables particulaires <cl>desse.

Posologie chez les patients souffrant d'insuffisance cardiaque chronique et d'une altération de la fonction rénale
La dose doit être déterminée pour chaque patient individualisé, en fonction de son état physique pharmacocinétique (poids, âge, sexe, état de santé).

Sauf prescription différente de votre médecin, la dose habituelle est la suivante:

Insuffisance cardiaque chronique et stable

Dose quotidienne de carvediol

Dose initiale :
