

## Nifedi-Denk 20 Retard

Prolonged-release tablet – oral use

Calcium antagonist

Active substance: nifedipine

### Package leaflet: Information for the patient

Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.

– Keep this leaflet. You may need to read it again.

– If you have any further questions, ask your doctor or pharmacist.

– This medicine has been prescribed for you only. Do not pass it on to others. It may harm them, even if their signs of illness are the same as yours.

– If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.

### What is in this leaflet

1. What Nifedi-Denk 20 Retard is and what it is used for
2. What you need to know before you take Nifedi-Denk 20 Retard
3. How to take Nifedi-Denk 20 Retard
4. Possible side effects
5. How to store Nifedi-Denk 20 Retard
6. Contents of the pack and other information

### 1. What Nifedi-Denk 20 Retard is and what it is used for

Nifedi-Denk 20 Retard contains the active substance nifedipine. Nifedi-Denk 20 Retard is used in the treatment of cardiac complaints, which are associated with insufficient oxygen supply to the heart muscle (angina pectoris), and in the treatment of hypertension.

Nifedi-Denk 20 Retard is used in:

- complaints (e.g. pain or tightness in the chest) in conditions with an inadequate supply of oxygen to the heart muscle during exertion: chronic stable angina pectoris (effort angina)
- vasospastic angina pectoris (Prinzmetal's angina, variant angina)
- non-organ-related high blood pressure (essential hypertension).
- complaints (e.g. pain or tightness in the chest) in conditions with an inadequate supply of oxygen to the heart muscle during exertion: chronic stable angina pectoris (effort angina)
- vasospastic angina pectoris (Prinzmetal's angina, variant angina)
- non-organ-related high blood pressure (essential hypertension).

If Nifedi-Denk 20 Retard is taken at the same time as one of these medicines, blood pressure should be monitored and, if necessary, a reduction of the Nifedi-Denk 20 Retard dose should be considered.

In patients with impaired liver function, the breakdown of this medicine can be delayed. The doctor will therefore carefully monitor the course of treatment and if necessary reduce the dose.

### Children and adolescents

Nifedi-Denk 20 Retard is not recommended for use in children and adolescents under 18 years of age because of the limited availability of data on safety and efficacy in this group of patients.

### Other medicines and Nifedi-Denk 20 Retard

Tell your doctor or pharmacist if you are taking, have recently taken or might take any other medicines.

### Which other medicines influence the effect of Nifedi-Denk 20 Retard?

Nifedipine is broken down with the help of a specific enzyme system (cytochrome P450 3A4). For this reason, this simultaneous use of medicines that affect this enzyme system can result in interactions with Nifedi-Denk 20 Retard. Both the extent and the duration of interactions should be considered when Nifedi-Denk 20 Retard is taken together with the medicines listed below.

**Enhancement of the effect and side effects of Nifedi-Denk 20 Retard by other medicines**

If you use the following other medicines at the same time as Nifedi-Denk 20 Retard, this can cause increased heart failure (decompensated cardiac insufficiency) and a low blood volume since you might experience a sudden drop in blood pressure.

**What are the possible side effects of Nifedi-Denk 20 Retard?**

1. What Nifedi-Denk 20 Retard is and what it is used for
2. What you need to know before you take Nifedi-Denk 20 Retard
3. How to take Nifedi-Denk 20 Retard
4. Possible side effects
5. How to store Nifedi-Denk 20 Retard
6. Contents of the pack and other information

### 2. What you need to know before you take Nifedi-Denk 20 Retard

#### Do not take Nifedi-Denk 20 Retard

• if you are allergic to nifedipine or any of the other ingredients of this medicine (listed in section 6)

• if you have had a cardiogenic shock

• if you have heart valve stenosis (aortic stenosis)

• if you suffer from complaints at rest (e.g. pain or tightness in the chest) in conditions with an inadequate supply of oxygen to the heart muscle (unstable angina pectoris)

• if you have had a heart attack within the last 4 weeks

• if you are taking rifampicin (a medicine to treat tuberculosis)

• if you are pregnant (first 20 weeks of pregnancy)

• if you are breast-feeding.

### Warnings and precautions

Talk to your doctor or pharmacist before taking Nifedi-Denk 20 Retard.

This medicine has been prescribed for you only. Do not pass it on to others. It may harm them, even if their signs of illness are the same as yours.

– If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.
