1.5.3 Patient Information Leaflet (PIL)

WARNING :

Precautions : Mebendazole is teratogenic & embryotoxic in pregnant rats at doses as low as 100 mg/kg. Hence use of the same is not recommended in pregnant women, (during pregnancy, especially during the first trimester, Mebendazole should be used only if the potential benefit justifies the potential risk to the foetus). Caution should be exercised when Mebendazole is administered to nursing mothers. Not recommended for children under 2 years of age. Patients receiving high doses of Mebendazole such as these with hydatid disease, should be supervised closely with blood counts & liver function being monitored.
