# Omol

## Tablets, Syrup & Drops

**Composition:**

**Tablets:** Each uncoated tablet contains Paracetamol 500 mg  
Each 5 ml contains.  
**Syrup:** Paracetamol 120 mg (Alcohol Free)  
Each 1 ml contains  
**Drops:** Paracetamol 100 mg (Alcohol Free)

**Properties:**

The analgesic and antipyretic action of Paracetamol is clinically proven. Paracetamol acts centrally and peripherally by prostaglandin synthesis inhibition.

**Indications:**

Omol is indicated for the relief of mild to moderate pain, fever, headache, migraine, common cold, influenza, neuralgia, toothache, teething pains, rheumatic pain, muscular pain and menstrual pain.

**Dosage**

**Adults:**  
1-2 tablets of Omol 500 mg or 4 times a day, total daily dose not to exceed 8 tablets (4 gm of Paracetamol) per day.

**Paediatric:**

Children 1-3 years: 5 ml of Omol syrup 3-4 times a day, to a maximum of 4 doses  
Children 3-6 years: 10 ml of Omol syrup 3-4 times a day, to a maximum of 4 doses  
Children 6-12 years: 10 ml - 20 ml of Omol syrup 3-4 times a day, to a maximum of 4 doses  
Infants: 1/2 ml-1 ml of Omol Drops.  
Infants under 3 months not recommended or as directed by the physician

**Precautions:**

Since this product contains Paracetamol, do not take other medications containing Paracetamol. Product should be used with caution in patients with previous history of severe hepatic or renal dysfunction and in alcoholics.

**Contraindications:**

Omol is contraindicated in patients with known hypersensitivity to paracetamol.

**Effects in Pregnancy & Breast Feeding:**

As per FDA-USA classification Paracetamol is considered as pregnancy category 'B' Paracetamol is distributed in breast milk in amounts ranging from 0.1% to 1.85% of the maternal dose. Accordingly Breast Feeding mothers & pregnant women need to consult physician before taking the medication.

**Side effects:**

Paracetamol is generally well tolerated in recommended dosage, however rare incidences of skin reactions such as

urticaria have been reported. Acute pancreatitis reported after prolonged use.

**Drug interaction:**

The anticoagulant effect of warfarin may increase by large doses of Paracetamol.

Concomitant use of Barbiturates and Tricyclic antidepressants may enhance the metabolism of paracetamol.

**Overdosage and treatment:**

In excessive overdose, more than 10 gm of Paracetamol, the drug may cause damage to the liver. Early symptoms such as general malaise, vomiting, nausea may be observed. In case of overdose, gastric lavage followed by intravenous, methionine or Nplasma Paracetamol levels. In case of suspected overdose, prompt medical attention is critical for adults as well as children even if you do not notice any signs or symptoms.
